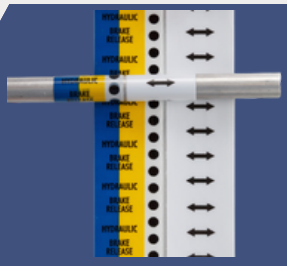
FLI® LINE, SOFTWARE, & EQUIPTMENT

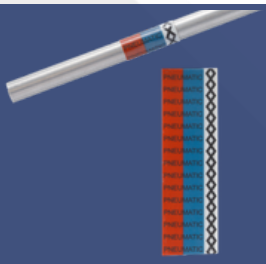
Fluid Line Identification

Fluid Line Identification (FLI®) tapes and labels are designed for aircraft tube and pipe identification. They are resistant to fuels, oils, and hydraulic fluid. FLI® is available in a continuous format or a die-cut self-laminating label format. FLI® meets the requirements for MIL-STD-1247 and MIL-T-9906, as well as other aerospace industry specifications.

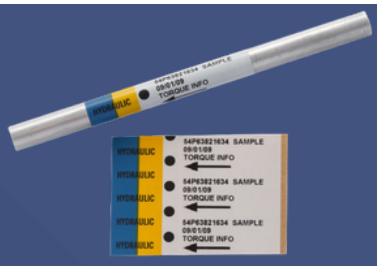
B-992 Continuous Printable Fluid Line Tapes



B-992 Continuous Printable Fluid Line Tape



B-992 Continuous Laminated Fluid Line Tape



B-992 Continuous Printable Fluid Line Tape

The B-992 continuous format Fluid Line ID Tape is a polyester material with a pressure-sensitive permanent acrylic adhesive. It is available in both a pre-printed laminated option or a thermal transfer printable option for on demand printing.

Continuous Formal Fluid Line ID Tape: B-999

The B-999 continuous format Fluid Line ID Tape is a polyester material with a heat-activated adhesive. It is available in both a pre-printed sub-surface option or a thermal transfer printable option for on demand printing.

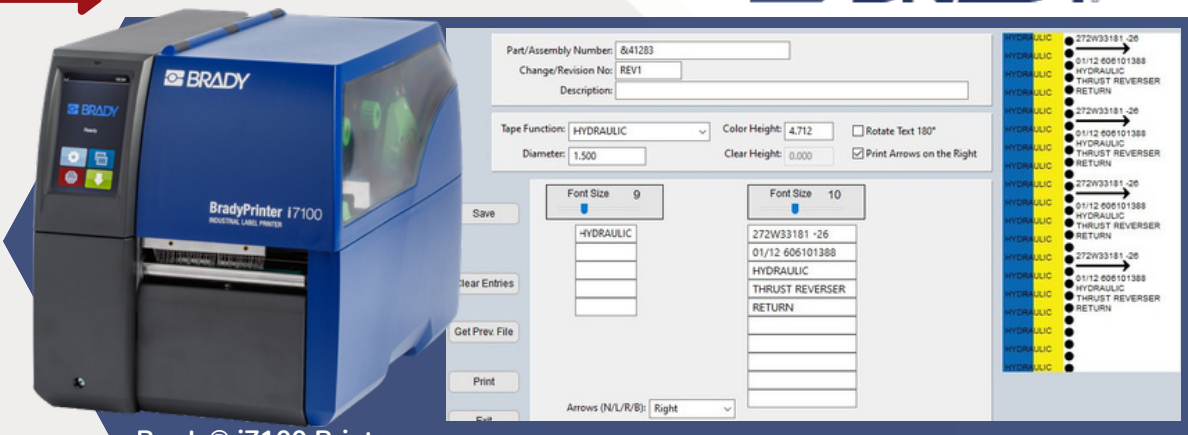
Printers & Software

BRADY®



Brady® i7100 Printer

Benchtop thermal transfer printers and FLI® Software for optimized production of customized Fluid Line ID labels on demand.

Fluid Line Self-Laminating Labels

Die-Cut Fluid Self-Laminating Labels are a polyester material with a permanent acrylic adhesive, thermal transfer printable portion, and clear tail for self-laminating.
